Practising maths at home – free and ad-free

Dear parents and carers,

we are practising addition and subtraction at the moment. If your child would like to keep practising at home, they can do it with the free game Number Jungle, or with the printable worksheets on the same site.

In the game a child runs through the jungle and answers by running through the gate with the right answer. The questions match the year group, and whatever is still shaky comes back more often. Ten minutes a day is plenty.

- **Free: no ads, no in-app purchases, no subscription.**
- **No account, no sign-up, no personal data. Progress stays on the device.**
- **The only online feature is an optional leaderboard where children appear under a made-up nickname. It can be switched off.**
- **Works offline, on Android, iPhone and iPad, in English and nine other languages.**
- **Made by a father in Germany for his own children.**

Practising at home is entirely voluntary. Everything we need, we also practise in class; this is simply an offer for children who would like more.

With best wishes,

_____

Scan this or type number-jungle.com

You will find the game for Android, iPhone and iPad there, and free worksheets to print.
